# Market size, share & growth

**1.3.1.1 — calculation practice · Unit 1 · Mr. Akram — Akademy**

## Formulas

- **Market size (value)** = average selling price × quantity sold
- **Market size (volume)** = total quantity sold
- **Market share** = (firm's sales ÷ total market sales) × 100
- **Market growth** = ((new – old) ÷ old) × 100

## Practice questions

- **Q1.** There are about 2.5bn internet users worldwide. Chrome has 34.7% market share, Internet Explorer 12.5% and Safari 15.2%. Calculate the number of users of each.
- **Q2.** The market for eating out in Nottingham was £450m last year; Maid Marian's Medieval Cuisine Ltd has a 7% share. The market is forecast to grow 6% next year and the firm expects to keep a 7% share. Calculate the firm's sales for both years.
- **Q3.** Last year 7.2 million smartphones were sold in the UK at an average price of £230 each; the current market is estimated at £1,880m. Calculate last year's market size (value) and the market growth.
- **Q4.** Annie Seed's Confectionery Emporium in Derby has sales of £785,000. Next year it aims to grow sales by 8.5%, with online sales accounting for 30% of total revenue. Calculate its total sales and online sales if the objective is met.

Tip: always show the formula, the substitution, and the final answer with units (%, £ or number of users).
